Dementia & Alzheimer's

Cerebral Palsy

Migraines

Stroke Rehab

Concussion Management

ADHD

Chiropractic care focuses on maximizing your body's natural capacity for self-healing. Chiropractic is drug-free and addresses the root cause of symptoms with non-surgical therapies. Your nervous system (the brain and spinal cord) is responsible for sending instructions to every organ and tissue in your body. When those messages are blocked by misalignments of the spine or improper joint motion, your body may respond with back pain, neck pain, headaches, or many other problems.
